

Statement of participation

Syed kamil Taqi Zaidi

has passed the free course including all mandatory tests for:

An introduction to exoplanets

This free 24-hour course explored planets outside the Solar System.

Issue date: 8 October 2026

COURSE CODE: EXO_1

An introduction to exoplanets

<https://www.open.edu/openlearn/science-maths-technology/an-introduction-exoplanets/content-section-overview>

Course summary

This free course, An introduction to exoplanets, introduces our galaxy's population of planets, and some of their many surprises. It explains the methods used by astronomers to study exoplanets and provides a general introduction to the methods of scientific inquiry. The course culminates in a discussion of life elsewhere in our Galaxy. This statement serves as proof of the successful completion of a course accredited by the CPD Standards Office. You have earned 24 CPD points through your participation in this course.

Learning outcomes

By completing this course, the learner should be able to:

- discuss planets, exoplanets, stars, galaxies and the Universe
- describe the various types of planets in terms of their size and comparison
- understand how astronomers detect and study exoplanets, and appreciate the limitations to the knowledge we have
- describe the characteristics of some particularly interesting exoplanets, and know a little about the Galaxy's history of planet formation
- summarise the current ideas about the likelihood of life and complex life elsewhere in the Galaxy.

Completed study

The learner has completed the following:

Week 1

Introduction and guidance

Planets and the Solar System

Week 2

Planets, large and small

Week 3

Dawn of the exoplanet era

Week 4

You're in my light – transits

Compulsory badge quiz (score 78%)

Week 5

How to measure your exoplanet

Week 6

Planets galore: the contents of the Milky Way

Week 7

The Special Ones

Week 8

Where do we go from here?

Compulsory badge quiz (score 94%)
